Summary

Currently a student in second year of Master's degree in Business Informatic (MIAGE) work study contract (SQLI) in Bordeaux, I intended me to the job of project manager.

This master's degree will be required to acquire a dual management - computer science and claim this business. Furthermore, I have gained experience during an internship at the INRIA in a research team (POTIOC) of Bordeaux by making a game in augmented reality, as well as during my internship at SQLI at Pessac (Testing Factory) where I learned to use different test methodologies (internship subject : ATDD). These experiences have allowed me to consolidate my choices to work with a team.

Miscellaneous

Sport
